Interns are placed in environmental health programs at the U.S. Centers for Disease Control and Prevention’s National Center for Environmental Health and Agency for Toxic Substances and Disease Registry (NCEH/ATSDR) in Atlanta, Georgia.

Interns have the opportunity to
• work closely with leaders in the field.
• experience the federal government work environment.
• attend scheduled weekly programming as well as external opportunities such as brown bag lectures, field trips, and journal club.
• gain a broad overview of environmental health topics such as environmental justice, global environmental health, the built environment, and water/food security
• present their summer research to an audience of peers and CDC employees.

Learn about three paid 10-week internships for students who are passionate about the environment, interested in human health, and curious about how these are linked.

Three Internship Opportunities for Student Leaders

INTERNSHIP DATES: WEDNESDAY, JUNE 10, 2015, TO FRIDAY, AUGUST 14, 2015

Apply for a paid 10-week internship for students who are passionate about the environment, interested in human health, and curious about how these are linked.

Which Internship Is Right for You?

**Collegiate Leaders in Environmental Health (CLEH)** is for undergraduate students of all majors who complete coursework and/or show dedication to environmental and/or health issues via their extracurricular activities. CLEH interns participate in a comprehensive program including environmental health project assignments, interaction with federal officials and scientists, and visits to important environmental health sites in and around Atlanta. Other activities include student-led journal club, field trips, and brown-bag lunches with CDC staff as well as lectures from prominent environmental health leaders in the Atlanta area. In addition, interns can attend the many seminars offered by CDC during the summer.

*Application deadline: Wednesday, January 28, 2015*

**Summer Program in Environmental Health (SUPEH)** is for undergraduate students majoring in environmental health in a program accredited by the National Environmental Health Science and Protection Accreditation Council (EHAC). SUPEH interns participate in activities with the Environmental Health Services Branch of CDC’s National Center for Environmental Health. Interns gain a variety of environmental health experience and an understanding of environmental health work at the local, state, tribal, and federal levels. Interns also shadow senior officials and scientists, spend time in local public health departments, and travel to important environmental health sites in the city of Atlanta and beyond.

*Application deadline: Wednesday, February 11, 2015*

**Summer Graduate Environmental Health Internship (GEH)** is for graduate students with majors or interests that support environmental health missions at NCEH/ATSDR. During the program, GEH interns are assigned to projects that use the skills they’ve acquired through graduate studies and personal experiences. As graduate students, GEH interns may choose to work on their summer research project more intensively, but they can also take advantage of lectures and other CDC opportunities with their fellow CLEH and SUPEH interns.

*Application deadline: Wednesday, February 25, 2015*

What we look for in an applicant:
We strive to select students from a variety of backgrounds and experiences, who have a clear passion and dedication to environmental and health issues. Tell us in your application why you are qualified, but also how you are unique and what you can bring to our program through your personal, professional, volunteer, work, or academic experiences.

**What Is Environmental Health?**
Environmental health is the discipline that focuses on the interrelationships between people and their environment, promotes human health and well-being, and fosters a safe and healthful environment. The health of the public is affected by the environments that surround us; from the air we breathe and the water we use to the places we work and the neighborhoods we live in. The interaction between the environment and human health is intrinsically linked. With an increasing number of environmental health officials nearing retirement, there is a need to train future leaders in field of environmental health. This is where you, the student, can make a difference.
