HINF 5501: US Health Care System Information Challenges in Clinical Care

Register Now for Fall 2012

One Credit – S/N.
Completely Online.
Undergraduate and Graduate Students.

Topics:

Electronic health records (EHR) – An introduction to what they do, how they improve medical care, and how to implement them.

Using electronic health records in different health profession settings.

How the organization of the US Healthcare system is related to electronic health records.

Who pays for health care and how electronic health records play a part in that system.

The government is investing $40 Billion in Health Information Technology (HIT) in the next 4 years with the goal for all hospitals, doctors’ offices, and other healthcare locations to be equipped with electronic health records (EHR) for their patients by 2014.

This is a great additional course for Pre-professional students – Medicine, Dentistry, Pharmacy, and others.

This course provides an introduction to a new area of exciting career opportunities. Learn about the cutting edge of information technology in health care.

Course Requirements:

- Review and participate in all 15 online modules.
- Complete a final online examination at the end of the semester.
