

CBS Adventures Abroad

Angelica Ortega // Copenhagen, Denmark

What did you learn or gain from your time abroad?

The core course I chose to study was Medical Practice and Policy. I was able to learn about Denmark's healthcare system and how each one is advantageous and disadvantageous.

What was your most memorable experience?

Getting to travel to Germany and Poland and shadow at the hospitals was one of the most enriching experiences I have had.

What from your experience abroad do you think you can use in your future career?

Everything that I have learned about the healthcare system is something I can use during medical school and as a doctor. Through this program I also learned how to conduct check-ups, the basics of emergency medical care and about some of the medical devices being used and how to use them.

Student Scoop

Major: Biology

Program: Fall semester in Copenhagen, Denmark (DIS)

Why should CBS students go abroad?

Learning in the different country allows you to not only learn about the specific subjects you are studying, but also about the culture and how it affects the community. You get an experience you won't be able to get on campus because every country has a different way of teaching.
